The Belmont Private Hospital project is a \$9m redevelopment/ refurbishment project for Healthe Care Australia and is the only Private Mental Health Facility in Brisbane. The hospital remains in operation whilst construction work proceeds.

The contracted works are staged so that buildings to be finished before other buildings can commence. Works also include the upgrade of infrastructure, the main stormwater system service and installation of a new fire main water service. This requires the single lane access road to be excavated for installation of pipes whilst maintaining traffic flow to the property.

To date the project has completed a new car parking area, demolition and rebuilding of the hospital dining room and the construction of a new group room facility.

Projected completion is November 2011.
