Brunswick Private Hospital

Location
Brunswick, VIC

Client:
Health Care Australia P/L

Project Status:
Current

Canopy steel framing

Erection of steel front canopy

The Brunswick Private Hospital project is a \$5.3m redevelopment/ refurbishment project for Health Care.

The hospital remains in operation whilst construction work proceeds. The project consists of three work faces which include a new hydrotherapy pool and a rehabilitation gymnasium; both of these are located inside the existing building and a new building. The new building consists of 10 single bed and 3 double bed rooms, a large consultant's area, a cafe and a large car park with further scope to add operating theatres on the first floor.

To date the project has completed the new structure and is now being fitted out, the hydrotherapy pool has been poured and the gymnasium is being painted.

Projected completion is September 2011.

Hydro-therapy pool pre-concrete pour

Hydro-therapy pool post-concrete pour
