

Wingham Beef Exports

Taree, NSW

Main building expansion works.

PROJECT DESCRIPTION

Construction of a new cold store and loading facility, packaging “Plate Freezer” structure, truck transport turning area and associated external works. The project was divided into 3 stages:

Stage 1 - establishment of a new truck access and turning area that initially provided an alternative access to existing loading areas and enabled the following stages to commence.

Stage 2 - demolition of existing structures to allow for the construction of a new building that houses the “Plate Freezer” packaging system installed by the supplier. The building had to be completed before the delivery of the Plate Freezer unit at the end of June 2015.

Stage 3 - construction of a new cold store and loading facility.

The buildings are constructed of structural steel framework and clad with metal sheet; with insulated panel rooms then constructed within the outer enclosure.

OVERCOMING CHALLENGES

Construction took place in an operational facility with continual truck and pedestrian movements; so to mitigate any safety issues we provided designated walk areas using water filled road barriers.

Preventing ingress of dust to existing packaging areas was paramount to maintaining hygiene standards; therefore a heightened level of dust control was introduced in all subcontracts.

CLIENT

Wingham Beef Exports Pty Ltd

PROJECT VALUE

\$6 million

CONTRACT

Construct

COMPLETION

November 2015
